## **Disclaimer**

Although every precaution has been taken in the preparation of this document, OpenPages and the author assume no responsibility for errors or omissions. No liability is assumed for damages resulting from the use of the information contained herein.

The Deliverables contained herein will be reviewed between Customer and the OpenPages project manager during weekly project review sessions. Deliverables shall be deemed delivered when OpenPages makes them available for download via the ftp site and notifies Customer of delivery. The Deliverable shall be deemed acceptable to Customer if Customer's project manager does not register any objection to the applicable deliverables within ten (10) business days of delivery, and OpenPages shall invoice Customer accordingly. In the event that Customer rejects a Deliverable due to non-conformance with the specifications set forth in the project plan, as reasonably determined by Customer, Open Pages shall correct such non-conformance, and shall re-submit the deliverable to Customer. Upon acceptance of the deliverables, the warranty regarding services, as set forth in Section 10 of the Agreement shall apply.

<b>Post-Installation Instructions</b> .....	50
<b>Notices</b> .....	50

## Prerequisites

This task requires that *OpenPages 7.4 or higher* be installed. Additionally, the following installers should be downloaded from IBM Passport Advantage® web site:

[https://www.ibm.com/software/passportadvantage/pao\\_customer.html](https://www.ibm.com/software/passportadvantage/pao_customer.html)

Note: IBM Security Directory Integrator is the latest name for IBM Tivoli Directory Integrator. You might see TDI and SDI used interchangeably in the documentation.

### 1. IBM Tivoli Directory Integrator (Any one of the below based on OS Environment):

- IBM Tivoli Directory Integrator Identity Edition V7.1.1 for Windows - x86-64 - Image/Part No. **CZUF7ML**

### 2. IBM TDI FixPack 4:

- IBM Tivoli Directory Integrator Identity Edition V7.1.1 Fix Pack 4 for OpenPages GRC Platform 7.2, 7.4 and 7.4 Multiplatform Multilingual – Image/Part No. **CN7SRML**

### 3. TDI / SDI Connector:

- IBM OpenPages GRC SDI Connector for UCF Common Controls Hub 7.4.0 Multiplatform Multilingual – Image/Part No. **CNQI0ML**

### 4. UCF Common Controls Hub Basic Subscription:

You must have a UCF Common Controls Hub Basic Subscription with the API Access add-on to use the connector.

<https://cch.commoncontrolshub.com/account-login.php>

You must also have IBM OpenPages GRC Platform version 7.4 or later.

## Installation Instructions

IBM OpenPages GRC SDI Connector for UCF Common Controls Hub is an optional connector that you can install. Use the connector to import data from the Unified Compliance Framework (UCF) Common Controls Hub into IBM OpenPages GRC Platform.

Complete the following steps/tasks to install and configure the UCF connector.

## Procedure

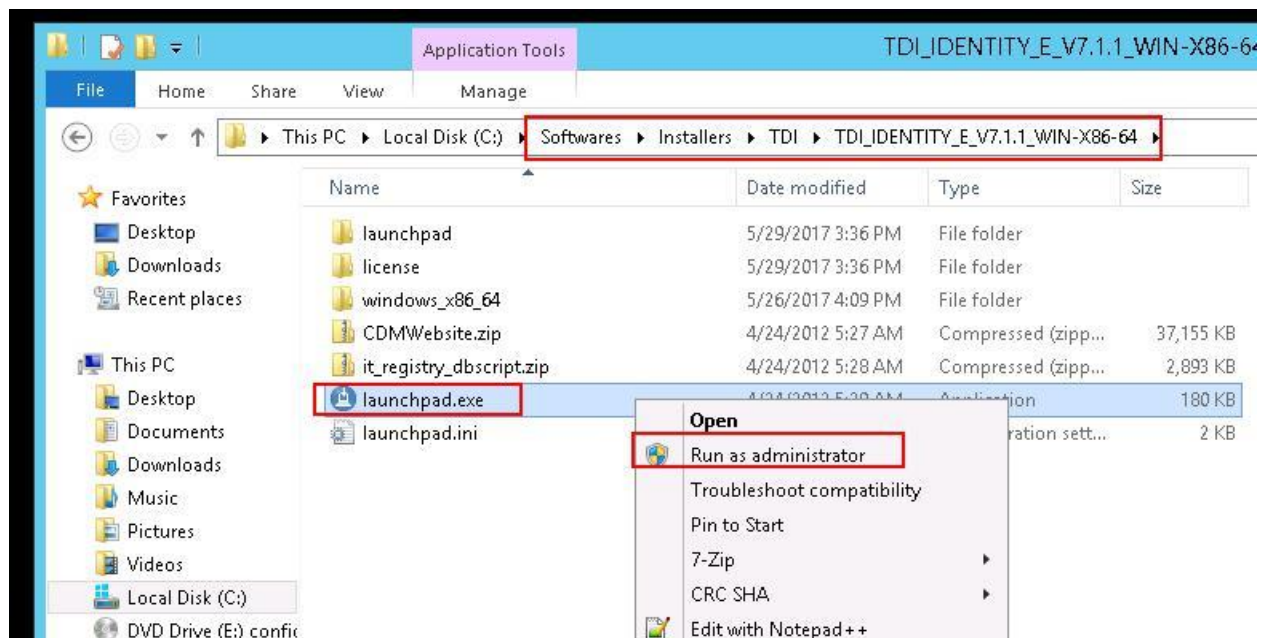

### Task 1: Install TDI 7.1.1 and its Fix Pack 4

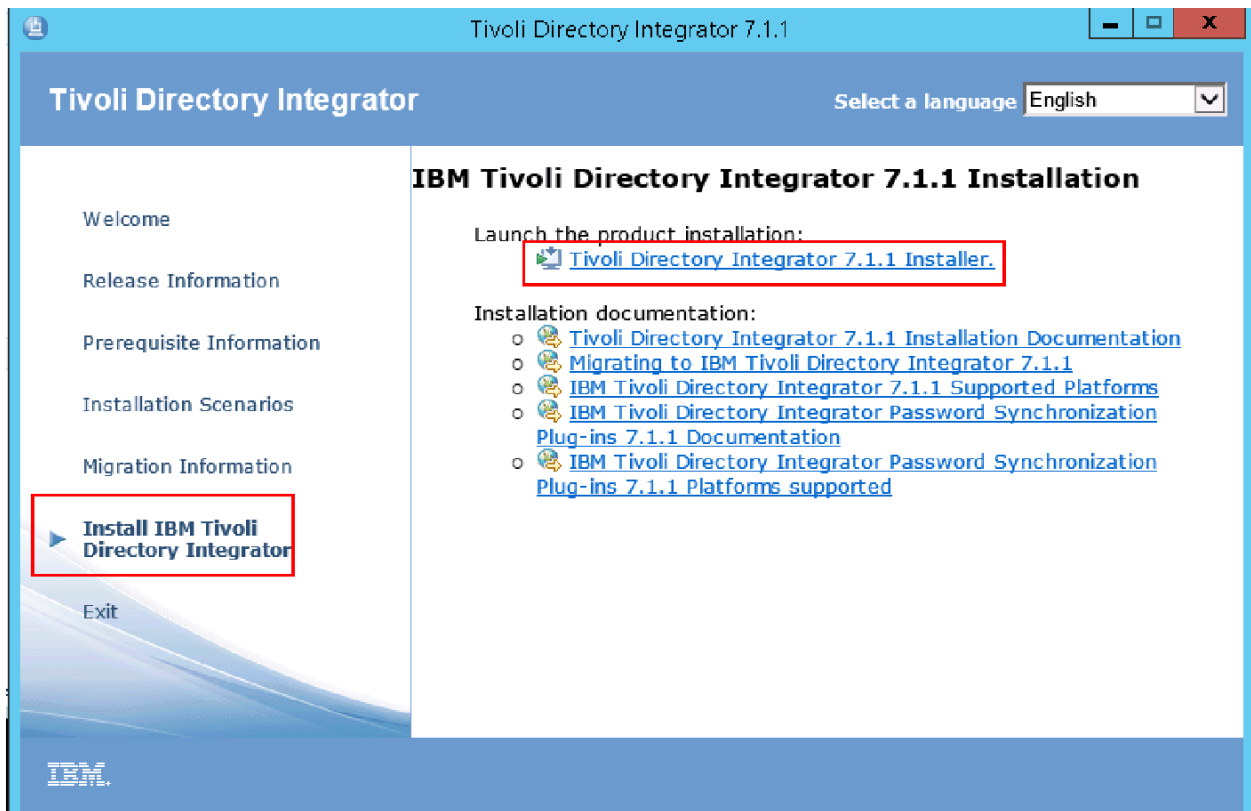

Install IBM Tivoli Directory Integrator 7.1.1 and then install IBM Tivoli Directory Integrator Fix Pack 4 from the OpenPages GRC Platform installation media. Here TDI is installed on Windows OS.

#### Install TDI

TDI is a general purpose integration tool that lets you build integrations between multiple data sources and targets. Along the way you'll want to map attributes between the systems, as well as apply trivial or complex transformation of the data as it moves from one place to the other.

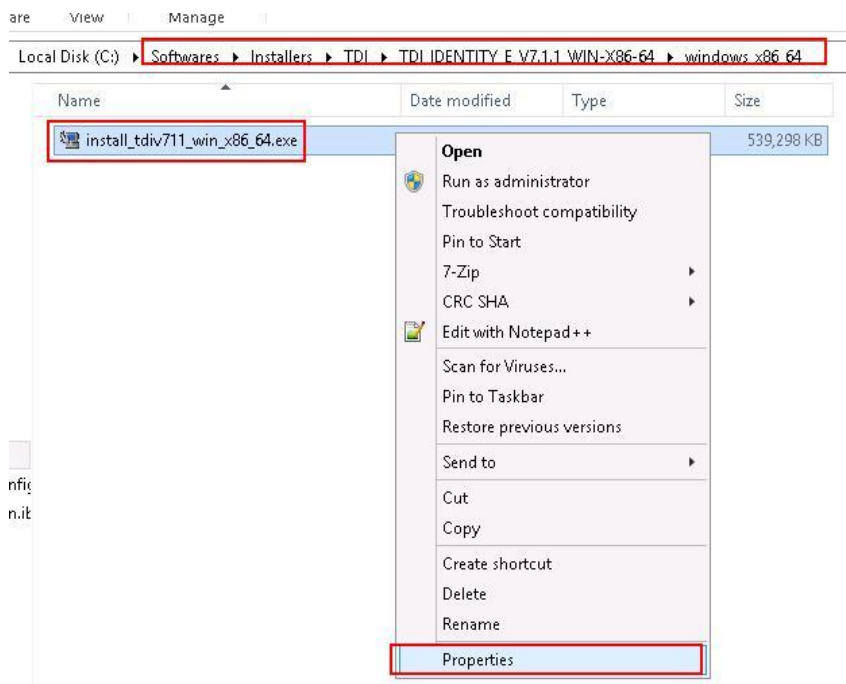

There are primarily two pieces to TDI. First, the Eclipse development Environment where integrations are built, tested and maintained. Secondly, the lightweight Java engine that runs the integrations. The TDI server runs equally well on a Windows laptop, Linux, SunOS, AIX, iOS and zOS.

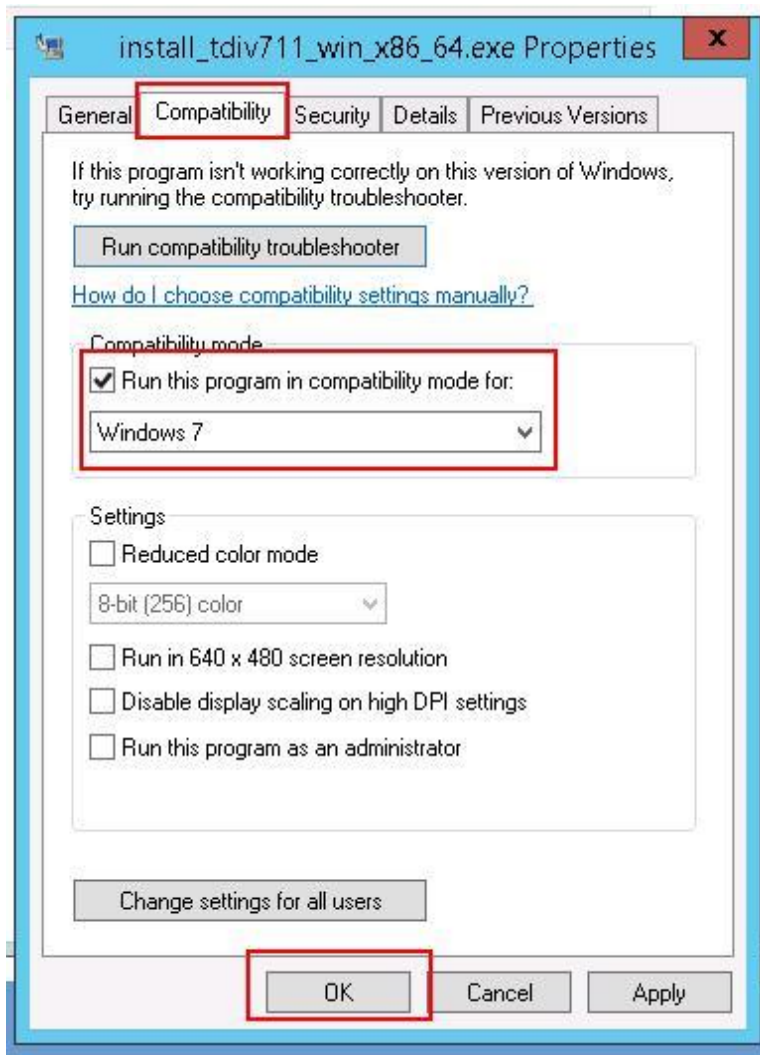

If you face the above error during install, then follow the below steps  
The TDI 7.1.1 installer needs to be executed in Windows 7 compatibility mode.

- Right Click on the TDI installer file and select Properties from the Context menu. For eg: Click on <ISO\_Image>\windows\_x86\_64\install\_tdiv711\_win\_x86\_64.exe and select Properties.
- Click on the Compatibility tab.
- Under the Compatibility mode section, set the the check box to true for "Run this program in compatibility mode for "
- Under the drop down select Windows 7.
- Click on OK to apply the compatibility mode.
- Now run the installer and proceed normally.

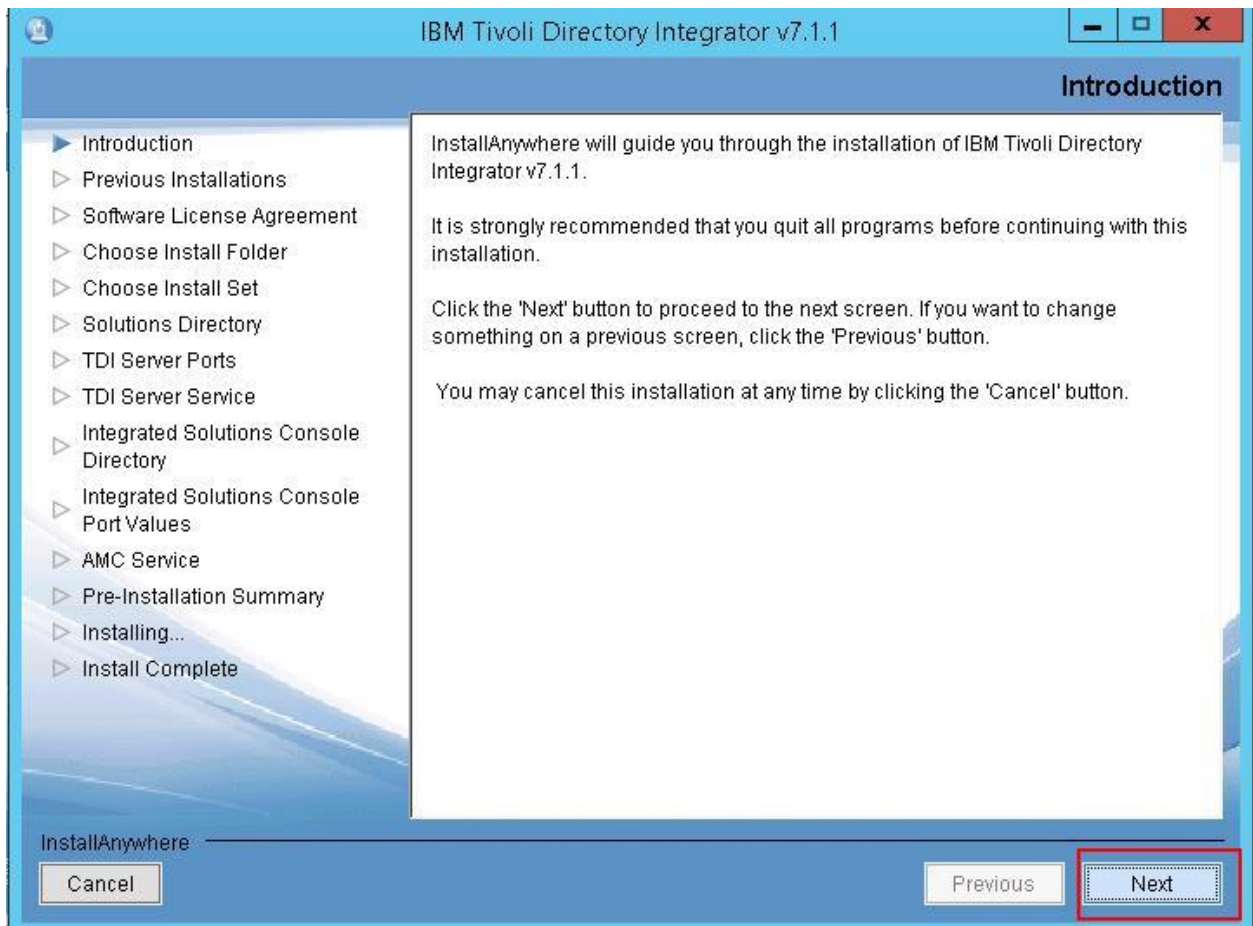

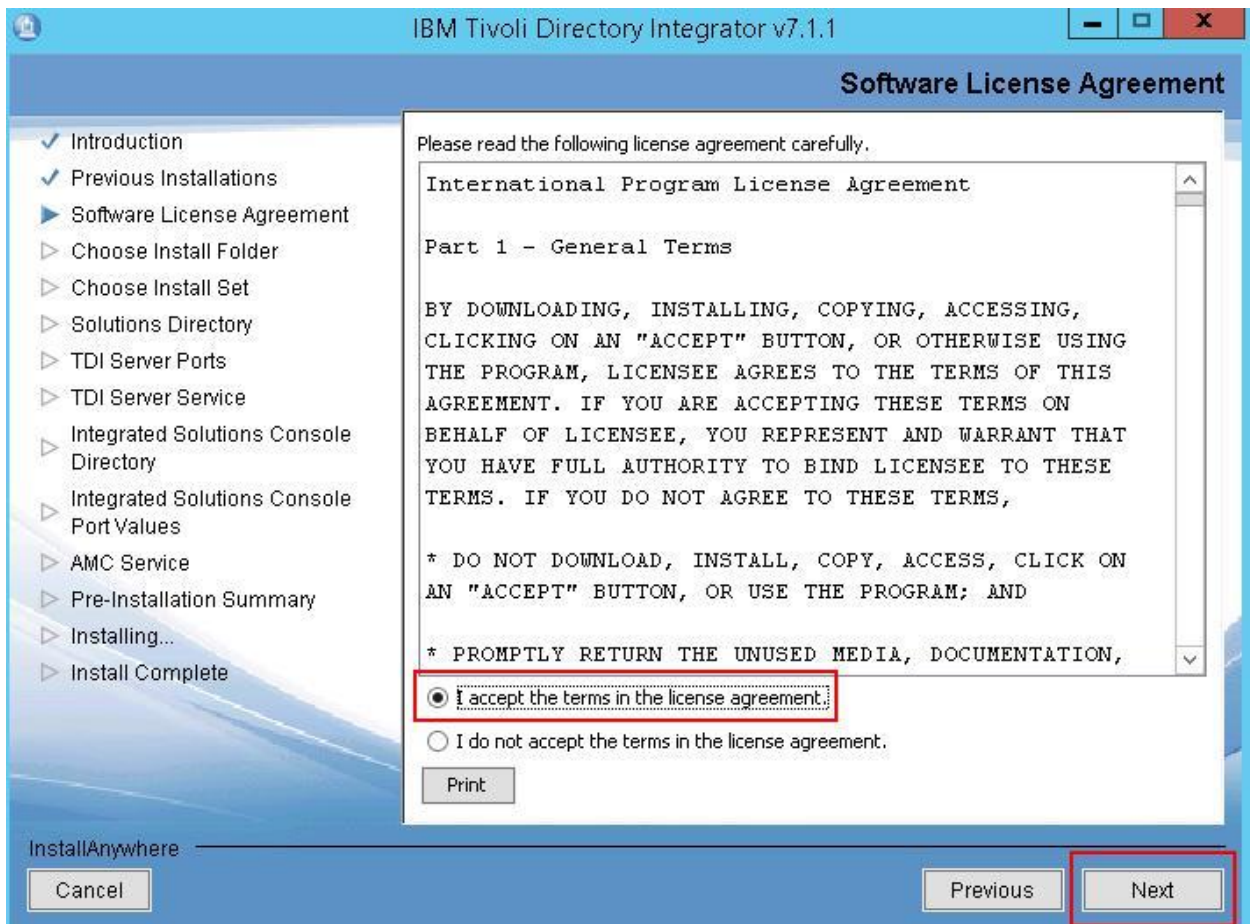

After done the above step, Follow the same steps to install TDI. (refer Page 1)

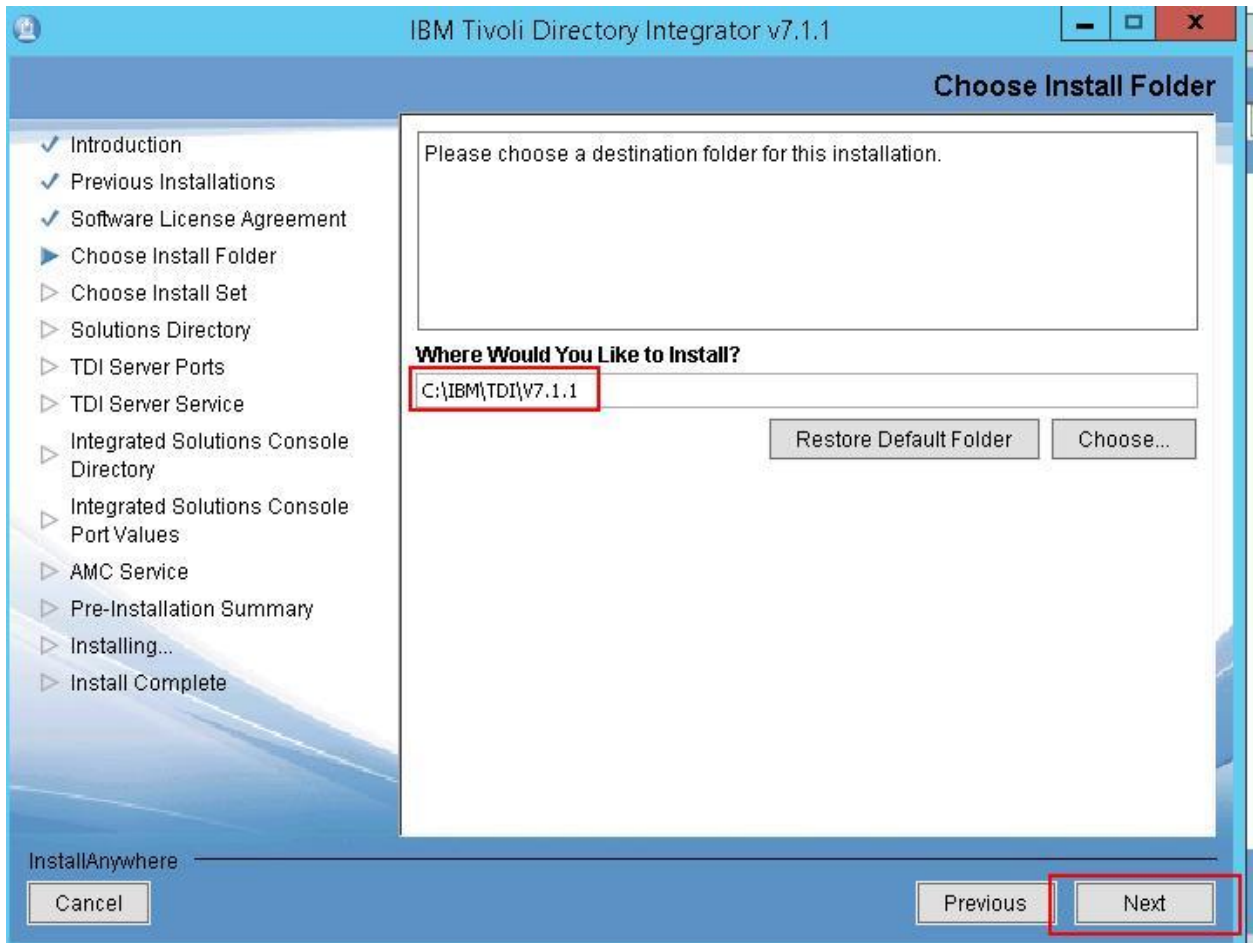

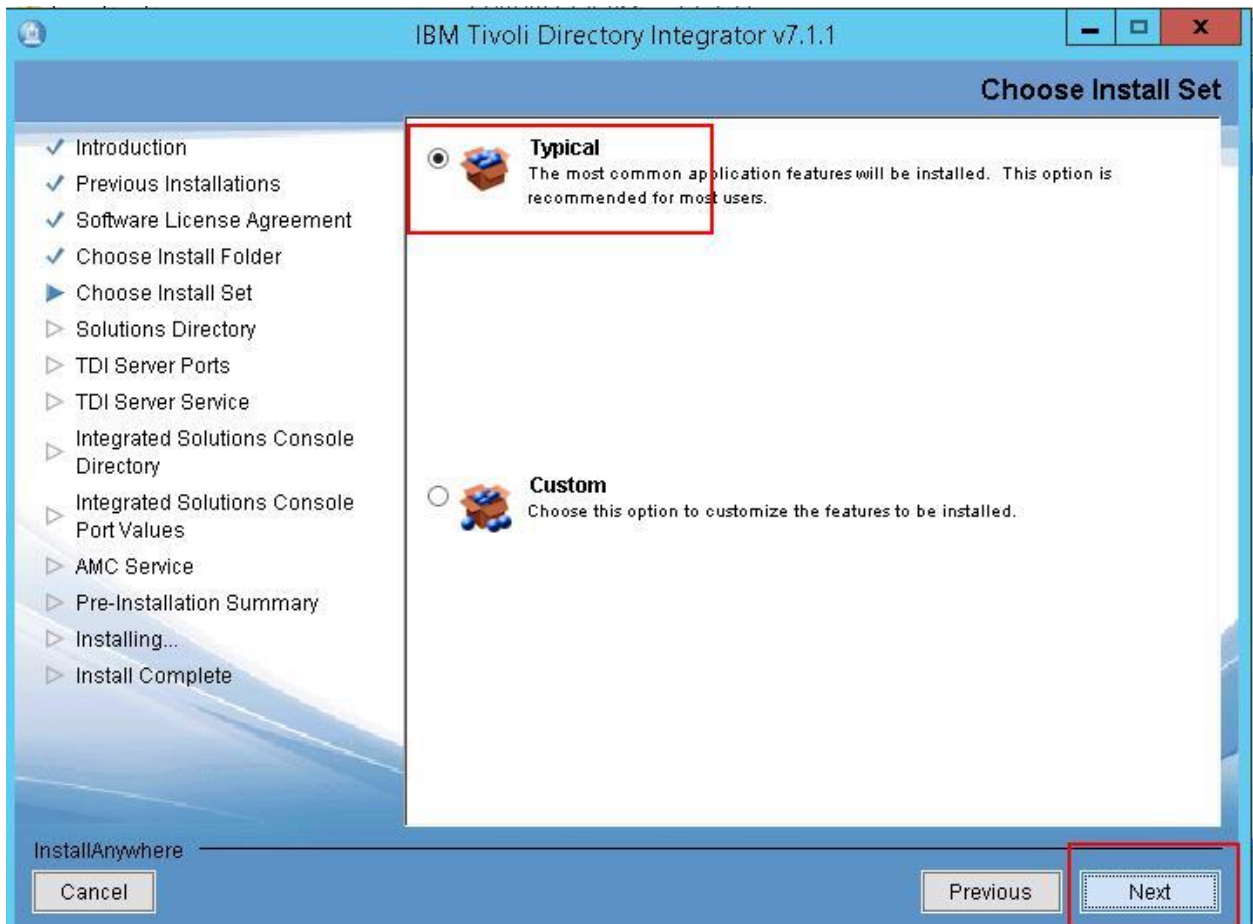

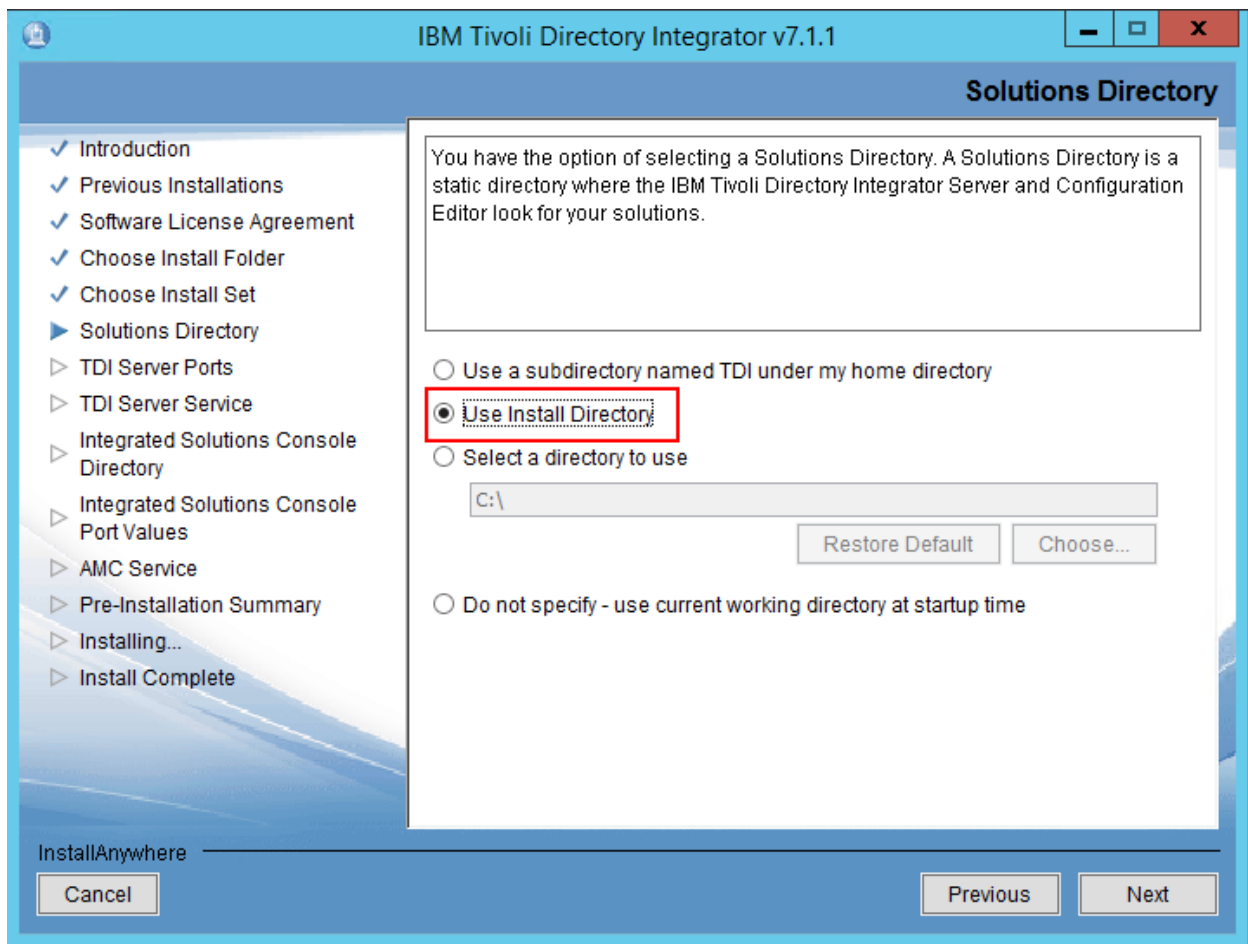

Click Next and again Click Next after few mins

IBM Tivoli Directory Integrator v7.1.1

### Server Port Values

Enter the port values to be used by IBM Tivoli Directory Integrator v7.1.1 Server.

Click Done and Close all.

## Install TDI FixPack 4:

- Stop the TDI Sever and AMC

Open Task Manager -> Services Tab -> Stop the below services

- Also change the StartupType from Automatic to Manual by using Windows Services. (Run Command -> type **services.msc**)

IBM Tivoli Directory Integrator (tdisrv) Properties (Loc... X

General Log On Recovery Dependencies

Service name: ibmdisrv-tdisrv

Display name: IBM Tivoli Directory Integrator (tdisrv)

Description:

Path to executable:  
C:\IBM\TDI\V7.1.1\win32\_service\ibmdiservice.exe

Telephony	Provides Tel...		Manual	Network S...

- Download the **7.1.1-TIV-TDI-FP0004.zip** and unzip the contents in any preferred folder.

- Copy the file **UpdateInstaller.jar** from the fixpack package and replace the copy in the **<TDI\_install\_dir>\maintenance** directory.

- On Windows:
  - Open the Command Prompt with Admin Privileges.
  - Navigate to the following directory **<TDI\_install\_dir>\bin**
  - Execute the following command

***applyUpdates.bat -update <unzipped fixpack folder>/TDI-7.1.1-FP0004.zip***

Unzipped folder path : (Please see the second step on above)

**C:\Softwares\Installers\TDI\TIVDIINIDED7.1.1FP4OPGRCPLAT7.2MP\7.1.1-TIV-TDI-FP0004**

- This should install the fixpack successfully.

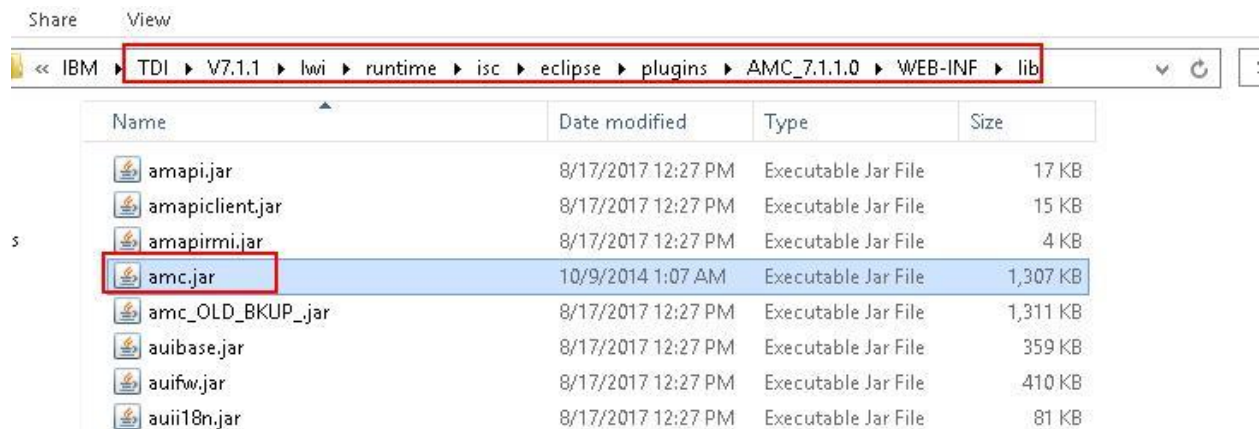

## Applying AMC Fix

- Stop the application server. In case of default TDI installation execute stop\_tdiamc.bat file. The stop\_tdiamc.bat is present in the <TDI\_Install\_Dir>/bin/amc directory.

**(In our case no need to do this. This was already done)**

**Note:** <TDI\_Install\_Dir> is C:\IBM\TDI\V7.1.1

- Replace the amc.jar file present in the current deployment with the new amc.jar file. The amc.jar file is present in <TDI\_Install\_Dir>/lwi/runtime/isc/eclipse/plugins/AMC\_7.1.1.0/WEB-INF/lib directory.

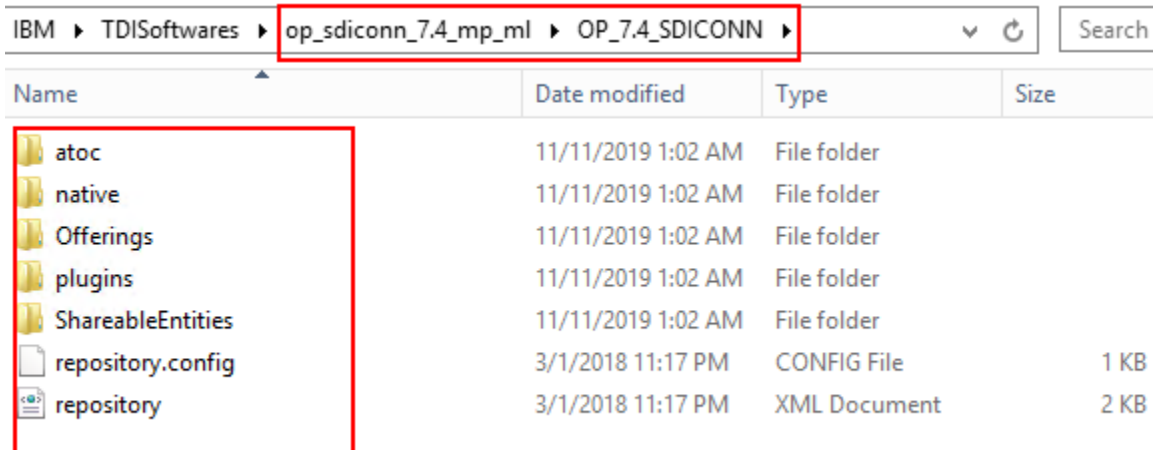

## Task 2: Install IBM OpenPages GRC SDI Connector for UCF Common Controls Hub

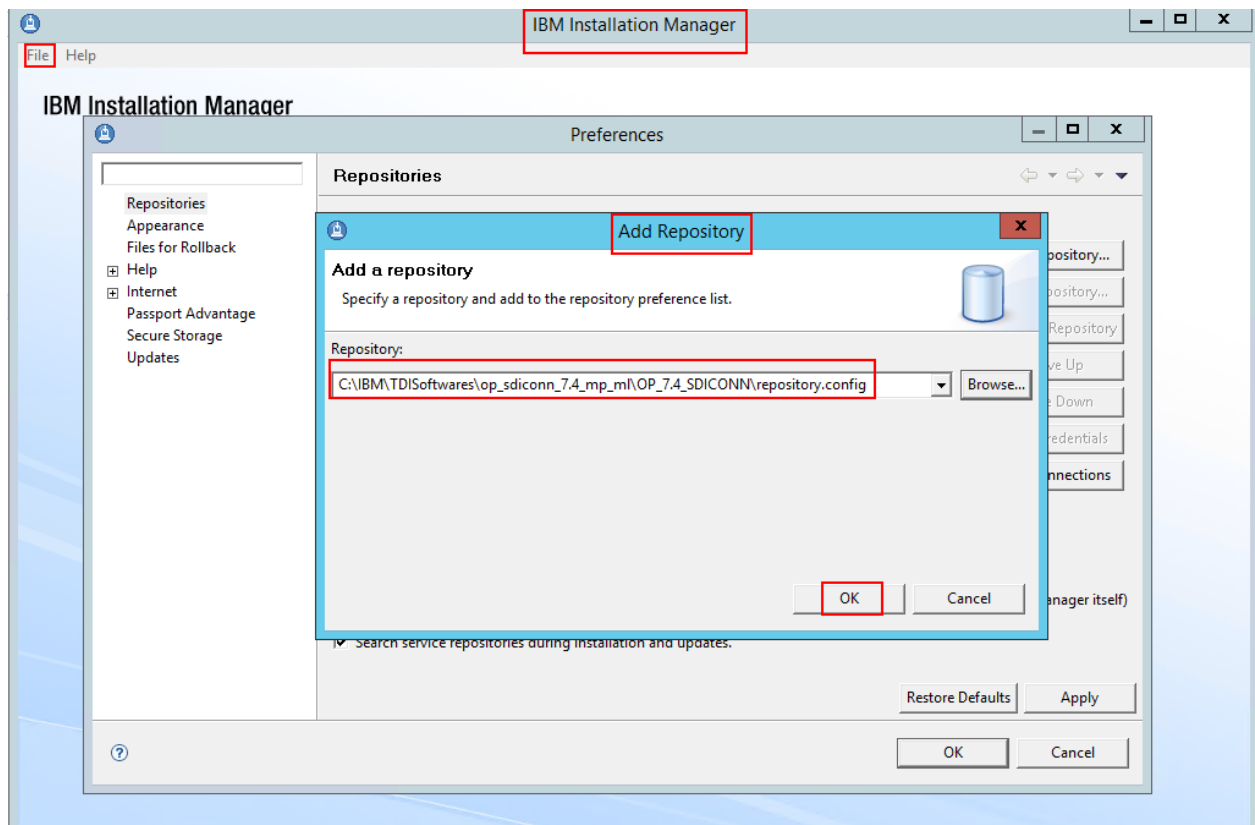

You must run the IBM OpenPages GRC SDI Connector for UCF Common Controls Hub installation program on the OpenPages admin application server.

### Steps to Install SDI Connector

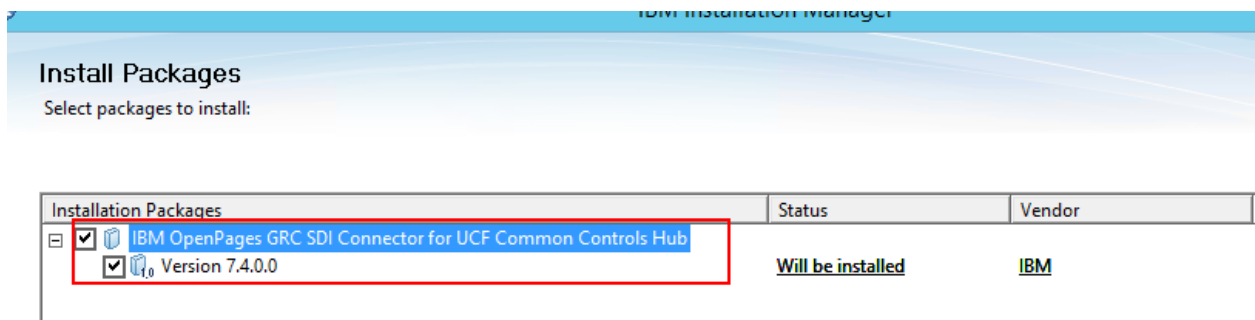

1. Extract the package files.

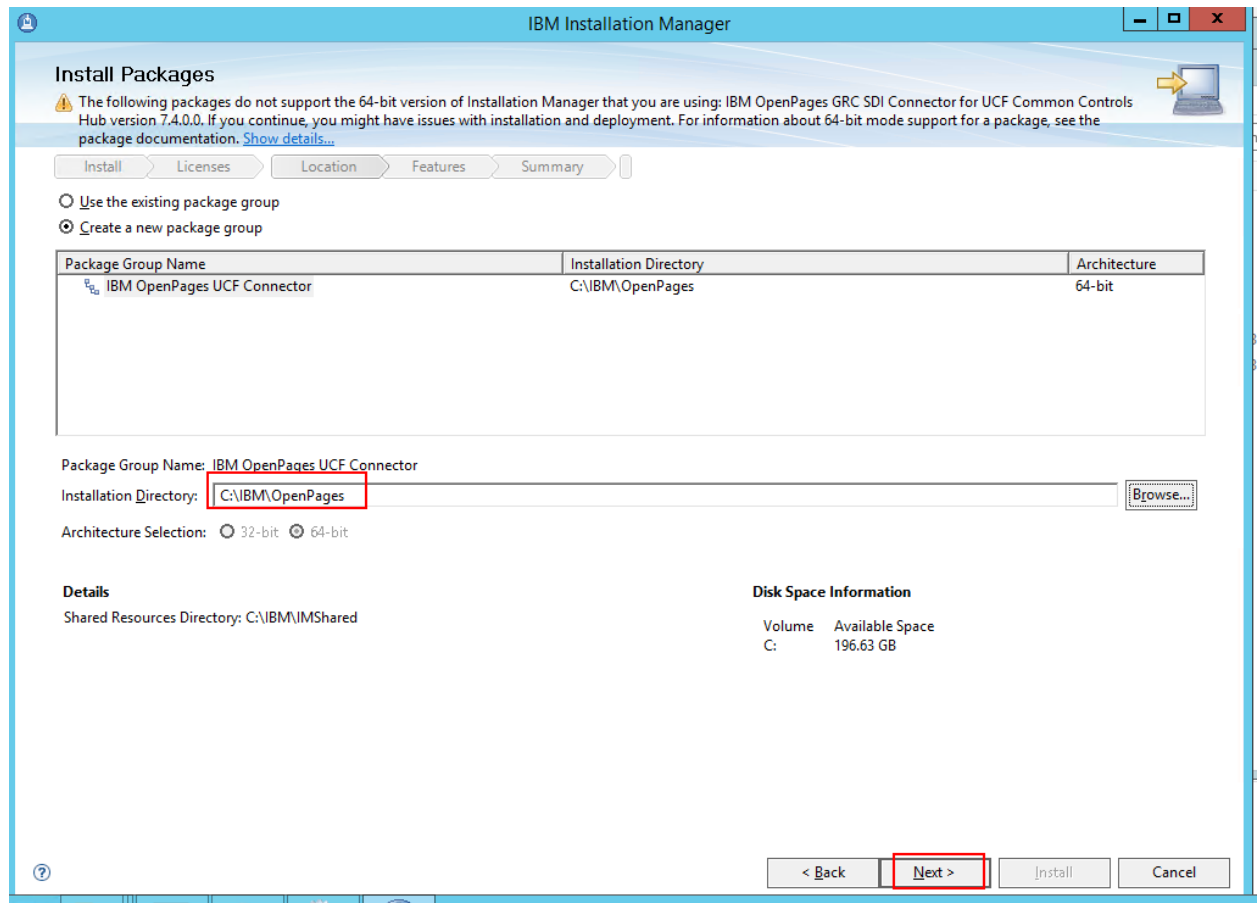

2. On the admin application server, run IBM Installation Manager.
3. Add the UCF connector repository to IBM Installation Manager.
  - a. Click File > Preferences.
  - b. Click Repositories and then click Add Repository.
  - c. Select the UCF connector installer package.
  - d. Click the repository.config file.
  - e. Click OK.
  - f. Click OK to return to the main IBM Installation Manager page.

4. Click Install.
5. Select IBM OpenPages GRC SDI Connector for UCF Common Controls Hub and Version 7.4, and click Next.

6. Accept the license agreement and click Next.
7. Type the location of your IBM OpenPages GRC Platform installation directory (OP\_HOME – Default is C:\OpenPages).

8. Click Next.
9. Click Next. If any errors appear on the page, follow the instructions to fix them before you continue. If you see warning messages about the 64-bit version of IIM, you can ignore them.
10. Click Install and after few mins Click Finish.

The packages are installed. [View Log File](#)

The following package was installed:

- IBM OpenPages UCF Connector
  - IBM OpenPages GRC SDI Connector for UCF Common Controls Hub 7.4.0.0

### Task 3: Import the Assembly Lines

The ucf\_integration.xml file is located in the <OP-HOME>/integrations/UCF directory. This is the project file that you use to import the assembly lines and other project files into Tivoli Directory Integrator.

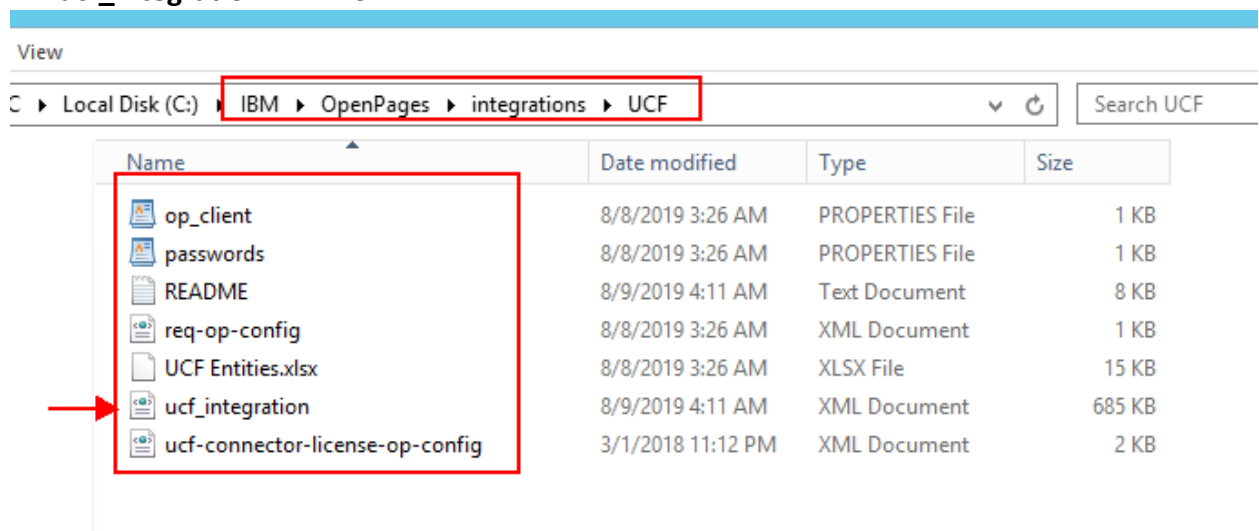

The UCF connector uses three assembly lines to import objects.

- UCF Authority Documents to OP Mandates
- UCF Citations to OP Submandates
- UCF Controls to OP Requirements

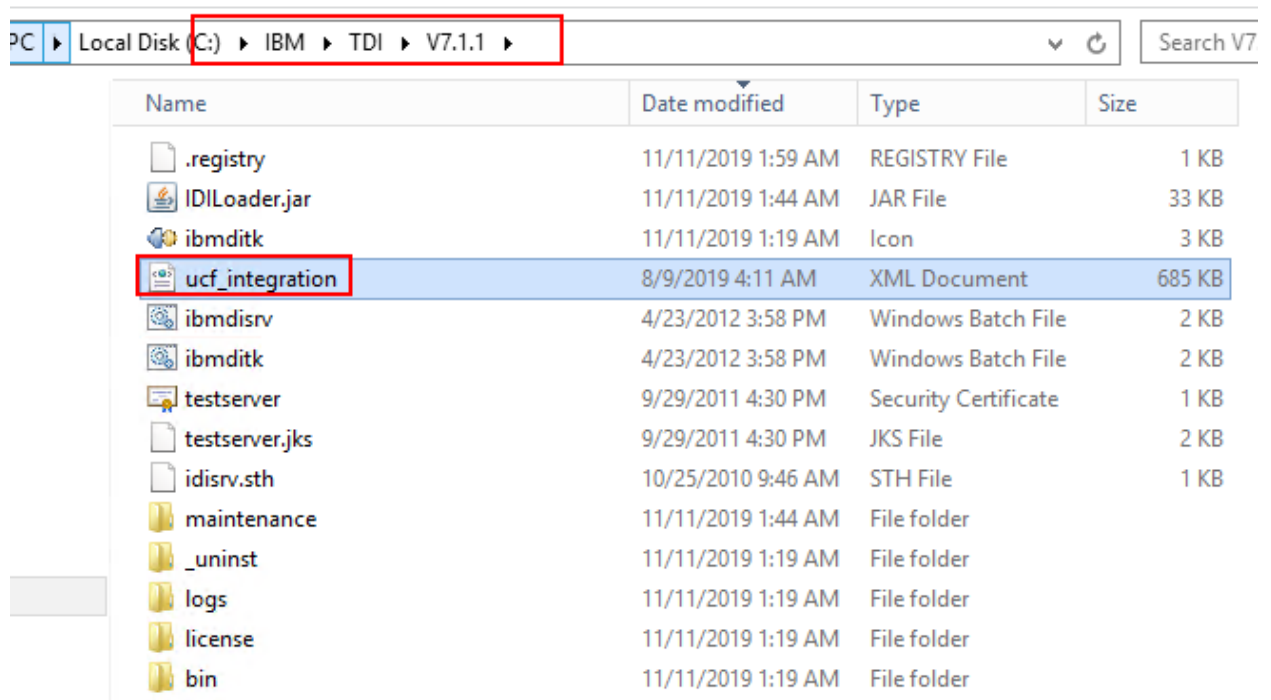

An assembly line is commonly referred to as an AL in the Tivoli Directory Integrator documentation.

#### Steps to import assembly lines:

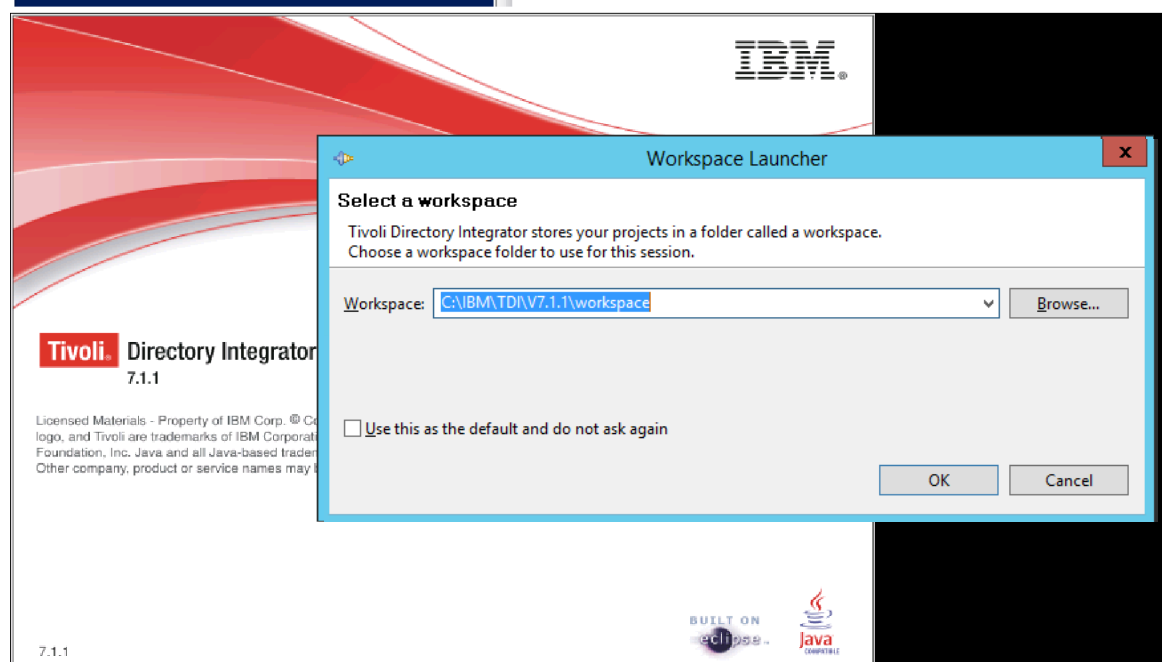

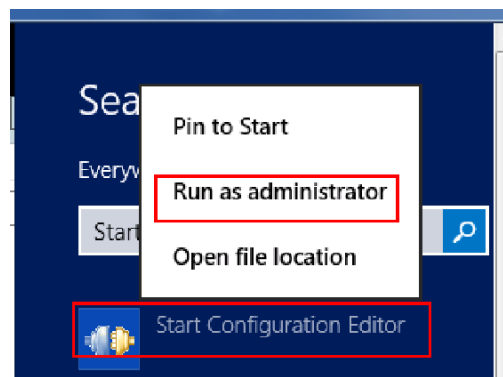

1. Go to the <OP\_Home>/integrations/UCF directory and locate the ucf\_integration.xml file

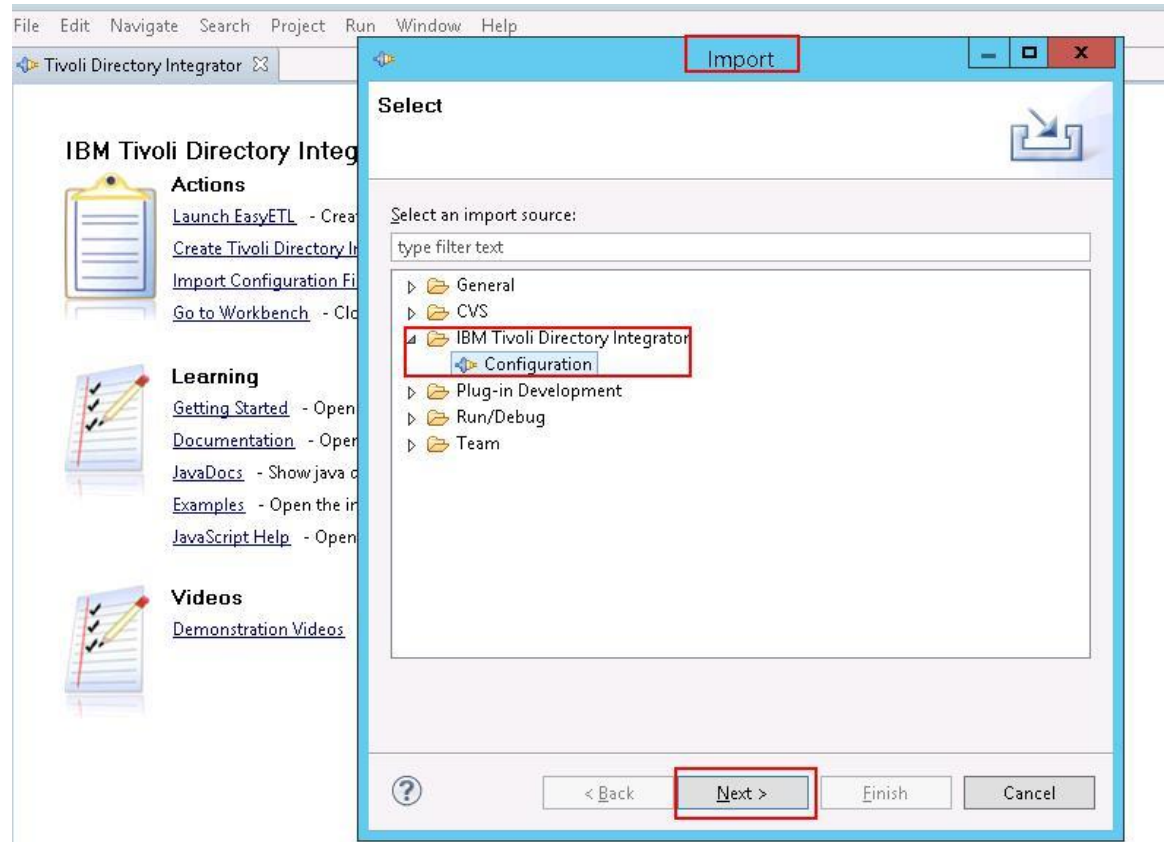

2. Copy the file to the server where IBM Tivoli Directory Integrator is installed.

3. Open the IBM Tivoli Directory Integrator by using Windows search

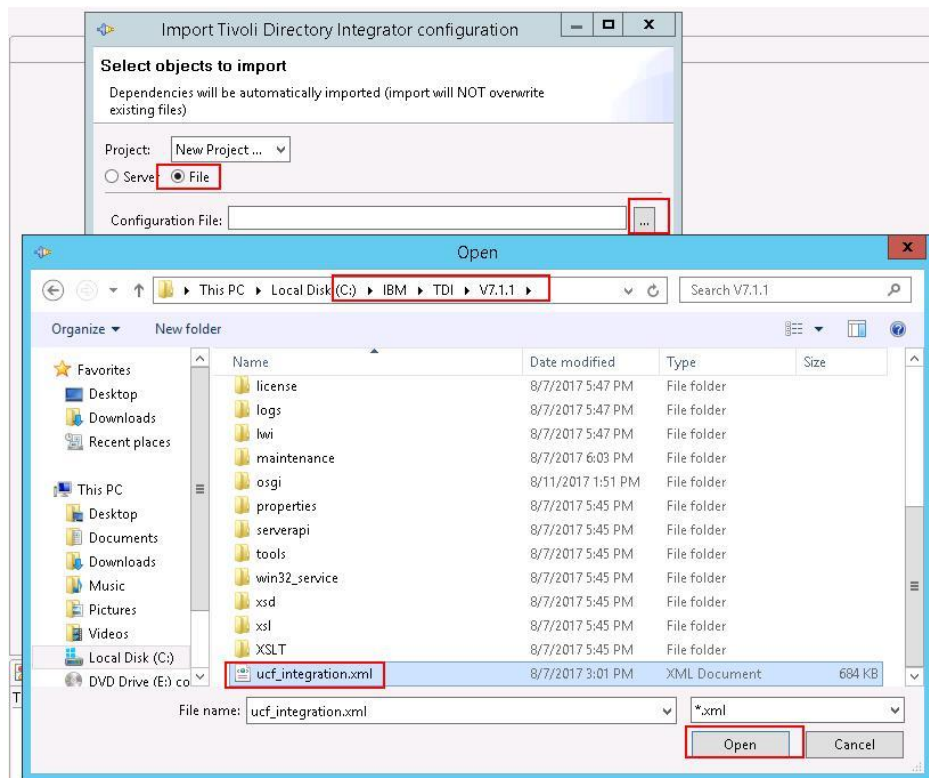

4. Import the **ucf\_integration.xml** file as a new project in IBM Tivoli Directory Integrator.
  - a. Click File > Import > IBM Tivoli Directory Integrator > Configuration.

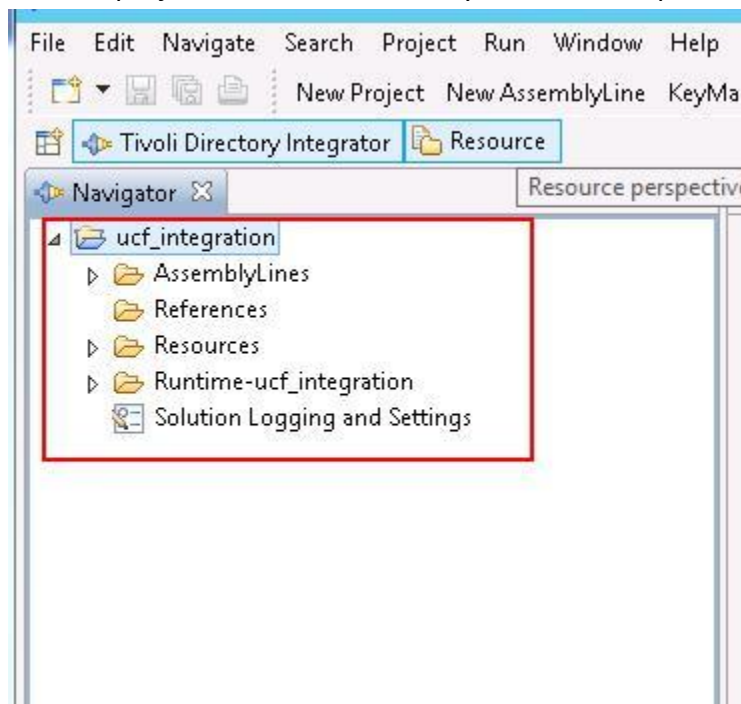

- b. Click Next.
- c. Select New Project in the Project list.
- d. Click File.
- e. Click the browse button next to the Configuration File field. Select the **ucf\_integration.xml** file.

- f. Click Finish.
- g. Type a name for the project, such as **ucf\_integration**
- h. Click Finish. The project is displayed in the TDI Configuration Editor and the project files are created in your TDI workspace directory.

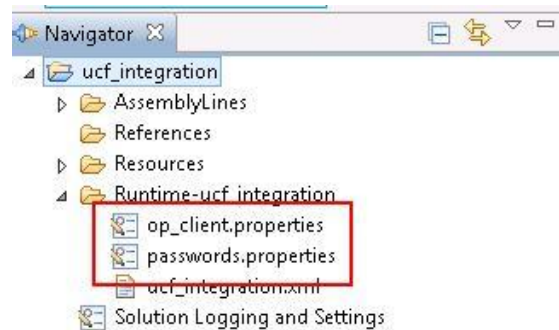

5. Copy the UCF connector property files into your project runtime Tivoli Directory Integrator workspace directory.
  - a. Go to the <OP\_Home>/integrations/UCF directory.
  - b. Copy the following files to the Runtime-ucf\_integration directory.  
Runtime-ucf\_integration directory is in TDI Workspace:

**C:\IBM\TDI\V7.1.1\workspace\ucf\_integration\Runtime-ucf\_integration**

- **passwords.properties**
- **op\_client.properties**

6. Right-click the ucf\_integration project in the TDI Configuration Editor and click Refresh.

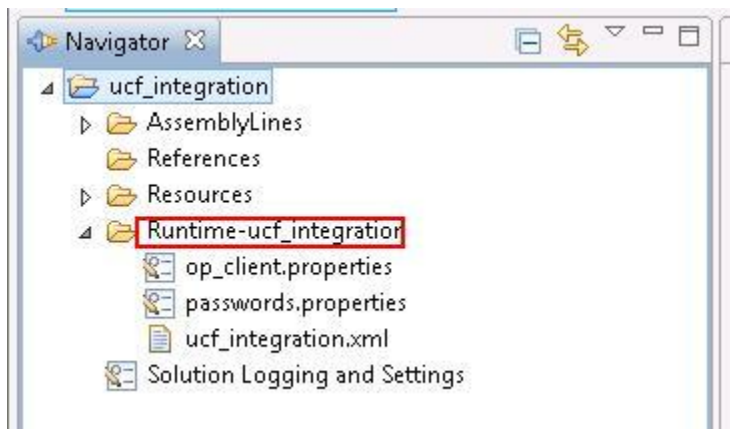

## Task 4: Configure the property files

You must configure the connection information that the UCF connector uses to connect to IBM OpenPages GRC Platform and to UCF Common Controls Hub. You configure the connection information by updating property files and by entering passwords in the Tivoli Directory Integrator Configuration Editor. Do this procedure after you import the assembly lines.

### Steps to Configure the properties files:

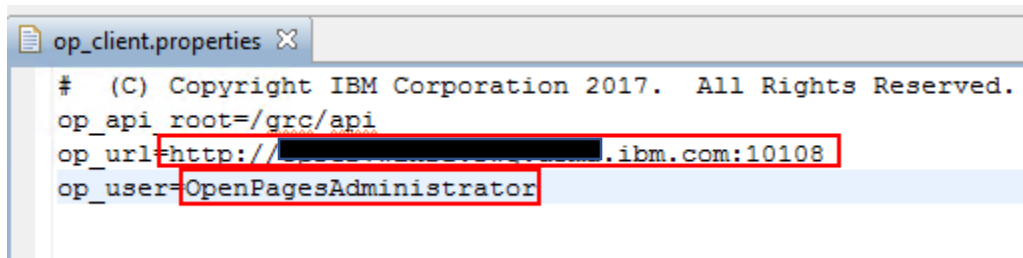

1. Open the Tivoli Directory Integrator Configuration Editor, open the **ucf\_integration** project.
2. In the Navigator pane, expand Runtime-ucf\_integration.

3. Right-click the **op\_client.properties** file and click Text Editor.
4. Set or change the property values.

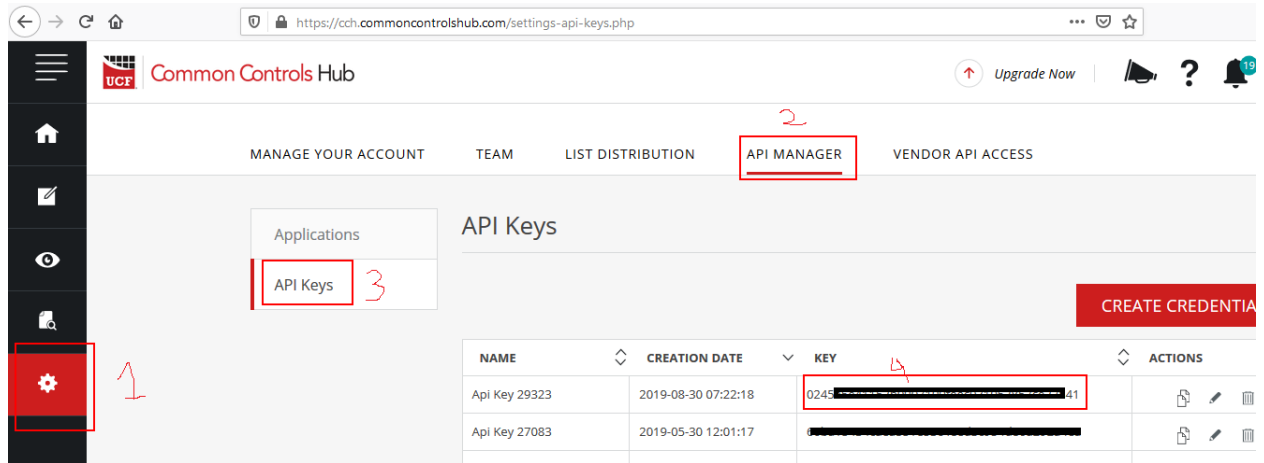

#### **For example:**

```
op_api_root=/grc/api  
op_url=http://<op-server>:10108  
op_user=OpenPagesAdministrator
```

5. Save the changes and exit the text editor.
6. Right-click the **password.properties** file and click Text Editor.
7. Type the password of the OpenPages user that you used in the **op\_client.properties** file.

8. Enter your UCF Common Controls Hub token in the `ucf_api_token` parameter. To get your token, log in to UCF Common Controls Hub. Click **Settings > API Manager > API Keys**. Click Create Credentials/ Get Existing Credentials. If you are unable to create a token, contact UCF Common Controls Hub.

9. Save the changes and exit the text editor. The values in the `password.properties` file are automatically encrypted.

10. Refresh the property files and the connectors with the updated connection information.
  - a. In the Navigator pane, expand Resources > Properties.
  - b. Right-click `op_client`, and then click Open.
  - c. Click Read properties from Server, and then click Send properties to Server.
  - d. Click Save, and then close the window.
  - e. Right-click `passwords`, and then click Open.
  - f. Click Read properties from Server, and then click Send properties to Server.
  - g. Click Save, and then close the window.

## Task 5: Configure OpenPages for UCF Integration

### 1. Importing UCF Business Entities

Import the business entities that are used by UCF into OpenPages GRC Platform. When the UCF connector imports data into OpenPages, the business entities are used for the imported objects. The **UCF Entities.xlsx** file contains the business entity structure for UCF. Import this file by using FastMap.

#### Steps to Import UCF BE:

1. Log in to OpenPages as a user with administrative privileges. Ex: <http://<OP-Server>:10108/openpages>
2. Click **Reporting > FastMap** Import.
3. Click Choose File and select the **UCF Entities.xlsx** file. The file is located in the **<OP\_Home>/integrations/UCF** directory.
4. Click **Import** data.
5. Review the verification report, and then click Import data. The import process begins. The progress of the import is displayed in the FastMap Import Status window.
6. Click Refresh to update the window.
7. Verify the import.
  - a. Log in to OpenPages as a user with administrative privileges.
  - b. Click **Organization > Business Entity Overview**.
  - c. Expand **Library > UCF**. The business entity UCF is updated. It has two child entities, Authority Documents and Harmonized Controls.

Name	Description
Library	Library
Example Preferences	
UCF	UCF
Authority Documents	Authority Documents
Harmonized Controls	Harmonized Controls
Library_POL_0001	
RCSA Staging Hierarchy	RCSA Staging Hierarchy for removed processes

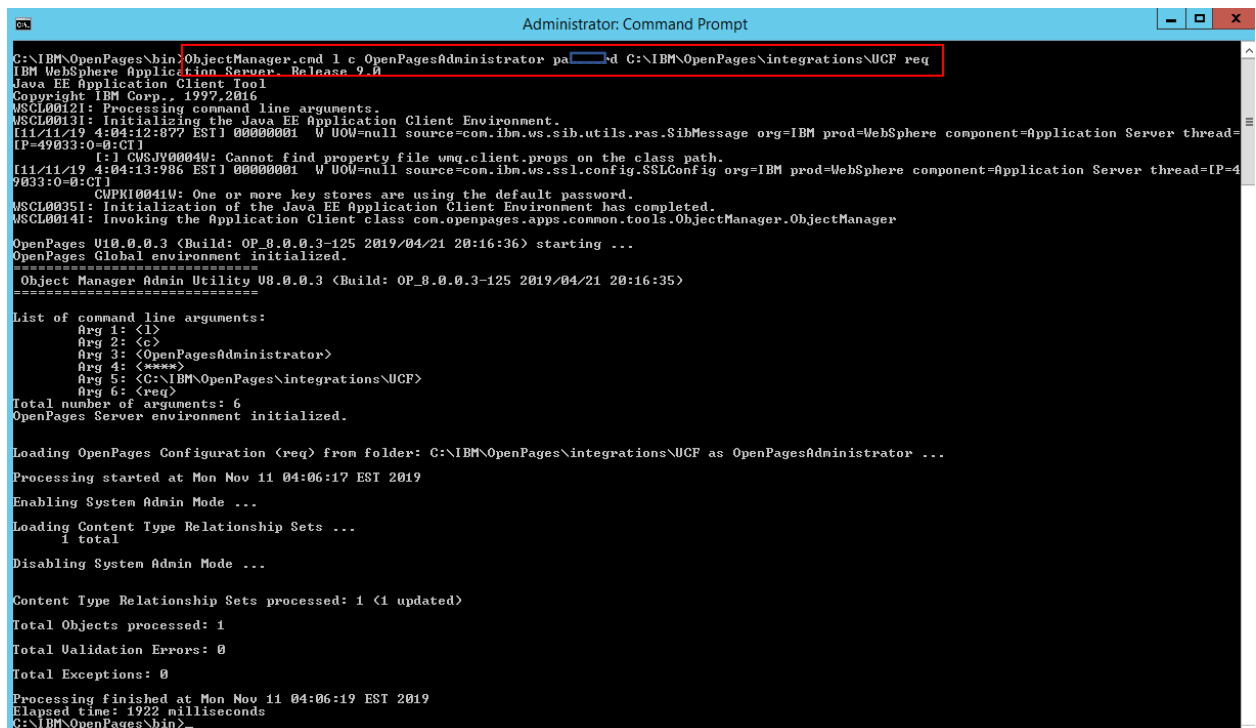

## 2. Updating object type relationships for UCF

The UCF connector requires an additional object type relationship. SOXBusEntity must be a parent of Requirement. Use ObjectManager to load the object relationship.

### Steps to load the object relationship:

1. Log on to the OpenPages administrative application server.
2. Copy the **req-op-config.xml** file to the administrative application server. The req-op-config.xml is in the <OP\_Home>/integrations/UCF directory.
3. Open a command line. If you are using Microsoft Windows, open a command prompt with the Run as Administrator option.
4. Go to the <OP-HOME>/bin directory.
5. Run the following command. Replace <loader-file-path> with the location of the req-op-config.xml file.

**ObjectManager.cmd | sh | c <OpenPages Administrator user>  
<OpenPages Administrator password> <loader-file-path> req**

```
C:\IBM\OpenPages\bin>ObjectManager.cmd 1 c OpenPagesAdministrator pa C:\IBM\OpenPages\integrations\UCF req

6. If you encounter any errors, review the log file, OP\_HOME/bin/logs/ObjectManager.log.
7. Verify the update.
  - a. Log in to OpenPages.
  - b. Click **Administration > Object Types**.
  - c. Click **Requirement**.
  - d. Click **Parent Associations**. Verify that **SOXBusEntity** is in the list.

### **3. Updating UCF field groups**

You may need to update the UCF field groups and fields. You need to update the enumerated string values for the following:

- UCF-Mand field group, UCF Category field
- UCF-SubMand field group, UCF Guidance Area field
- UCF-Req field group, UCF Guidance Area field

The changes that you need to make are the same for each field.

**Note:** Please check the below enumerated string values already available on OP system under the given field group. From OP7.4 onwards the below values already present in the OP system.

#### **Steps to update enumerated String values:**

1. Log in to OpenPages as a user with administrative privileges. Ex: <http://<OP-Server>:10108/openpages>
2. Click **Administration > Field Groups**.
3. Click **UCF-Mand**, and then click **UCF Category**.
4. Add the following values if not present:
  - Risk Management Organizations
  - Banking and Finance Organizations
  - Energy Organizations
  - Healthcare and Life Science Organizations
  - Payment Card Organizations
  - Records Management Organizations
  - Security and Privacy Organizations
  - International
  - North America
  - Australia-Oceania
  - Asia
  - Configuration
  - South America
  - Africa
  - Europe
5. Click **UCF-SubMand**, and then click **UCF Guidance Area**.
6. Repeat steps 4 and 5 to update the values.
7. Click **UCF-Req**, and then click **UCF Guidance Area**. Repeat steps 4 and 5 to update the values.

## Create a List:

The screenshot shows the 'Common Controls Hub' interface. On the left is a sidebar with navigation icons. The main area is divided into two panels. The left panel, titled 'Authority Documents', has a search bar and filters for 'GEOGRAPHY' and 'SUBJECT MATTER'. It shows a list of regions and countries with checkboxes. The right panel, titled 'New List', shows a table with columns for 'Citations', 'Mandates in Citations', and 'De-duplication Factor'. It also has a table for 'Common Controls' with columns for 'KEY', 'Mandated', 'Implied', and 'Implementation'. A red box highlights the 'SAVE LIST' button in the top right corner.

- 1 -> Open the CCH Workspace to Create/Edit the List (containing your chosen authority documents)
- 2 -> Choose the Level 1 (Ex: Continent/Region Specific)
- 3 -> Choose the Level 2 (Ex: Country Specific)
- 4 -> Choose the Level 3
- 5 -> Choose the Level 4 (In this example, this is the Authority documents)

The screenshot shows the 'Manage Your Saved Lists' interface. It features a 'New List' panel with a search bar and filters. A red box highlights the 'SAVE LIST' button in the top right corner.

After chose the Authority documents, Now click to button Save List to save on List.

# Save List

Now the list is saved.

**Note:** You can edit/modify the list include OR exclude the chosen authority documents.

## Edit the Saved List:

The screenshot shows the 'Common Controls Hub' interface. On the left is a sidebar with navigation icons. The main header includes the UCF logo and 'Common Controls Hub' text, along with an 'Upgrade Now' button and notification icons. The main content area has tabs for 'COMMON CONTROLS', 'BUILDS', 'COMPARE', and 'TRACKING'. Below these tabs, there's a 'View Saved Lists' dropdown and a 'Manage Your Saved Lists' link. A red arrow points to the 'Authority Documents' section, labeled '1'. Another red arrow points to the 'Manage Your Saved Lists' link, labeled '2'. The 'Authority Documents' section shows a search bar and a list of geographies with counts. The 'Manage Your Saved Lists' section shows a 'New List' form with fields for Citations, Mandates, and De-duplication Factor.

1 -> Choose the Workspace

2 -> Manage the Existing Saved Lists

The screenshot shows the 'Manage Your Saved Lists' interface. It features a table with columns for 'LIST NAME', 'CREATED BY', 'CREATED', 'EDITED', 'RECIPIENT', and 'ACTIONS'. The 'ACTIONS' column contains icons for 'Shared', 'Distributed', 'Received', 'Published', and 'Copied'. A red box highlights the 'IndiaPrivacyProtestList' row, and a red arrow points to the 'Shared' icon in the 'ACTIONS' column, labeled '2'.

### Note:

1 -> List is **Shared** to public and this list ready to mapped with UCF connector via TDI

2 -> Edit the List (Which is already opted the required Mandates/SubMandates/Requirements documents for the given list)

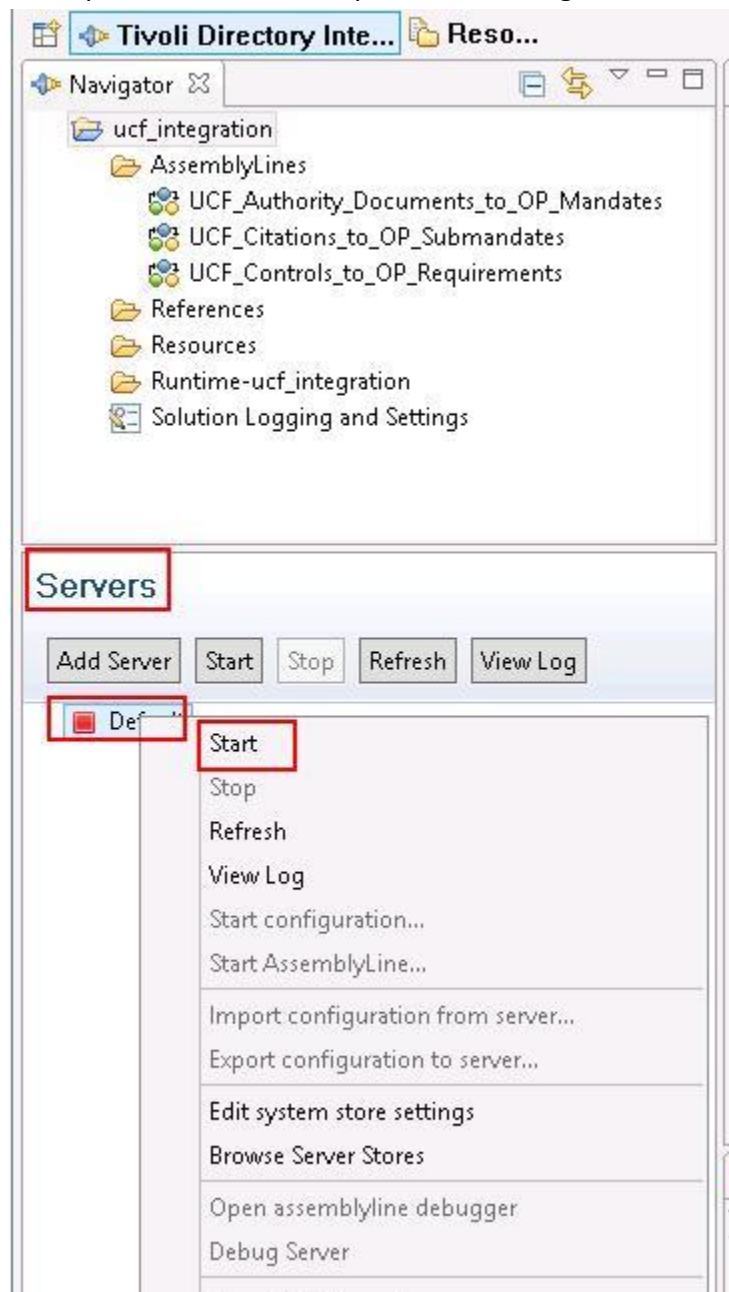

The screenshot shows the 'Common Controls Hub' interface. On the left is a sidebar with navigation icons. The main area is divided into two panels. The left panel, titled 'Authority Documents', contains a search bar and a list of documents categorized by geography. The right panel, titled 'IndiaPrivacyProtestList', shows a table of controls with columns for 'Citations', 'Mandates in Citations', and 'De-duplication Factor'. Red arrows and numbers indicate the steps to update the list: 1. Selecting documents in the 'Authority Documents' list, 2. Clicking the 'Duplicate List' button, and 3. Clicking the 'UPDATE LISTS' button.

- 1 -> Include the other Authority Document in the List
- 2 -> Update the List (This is for option you can Share and/or Publish the List)
- 3 -> Update the List

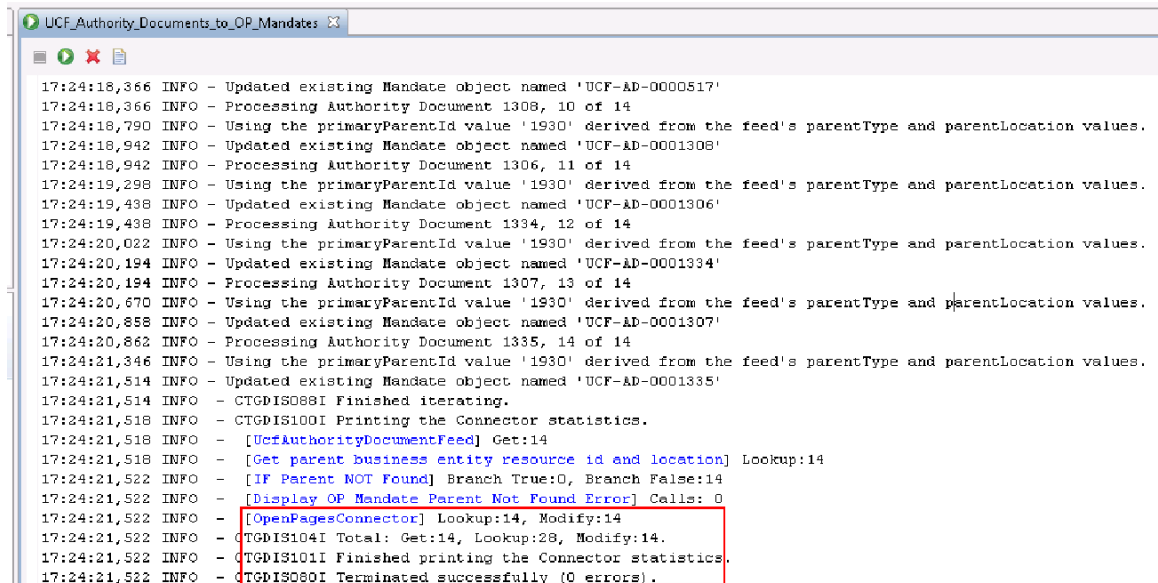

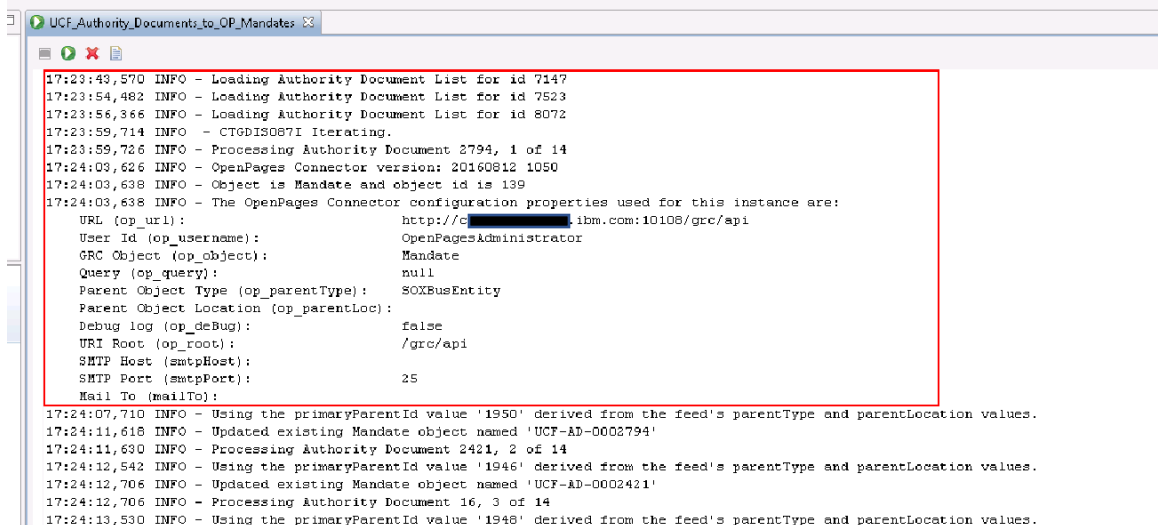

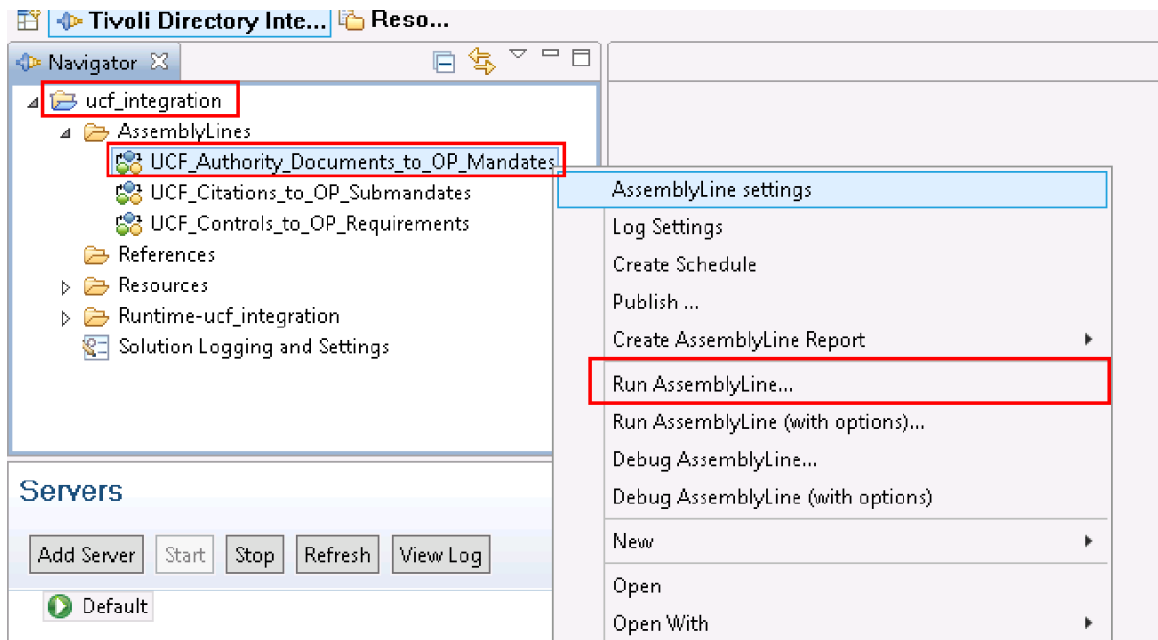

The screenshot shows the 'Common Controls Hub' interface after the list has been updated. A red box highlights the message 'Your list has been updated!' in the top left corner. The interface includes tabs for 'COMMON CONTROLS', 'BUILDS', 'COMPARE', and 'TRACKING'. Below the message, there are buttons for 'Create New List', 'Manage Your Saved Lists', 'Duplicate List', and 'UPDATE LISTS'.

## Task 7: Load UCF Data to OpenPages using TDI

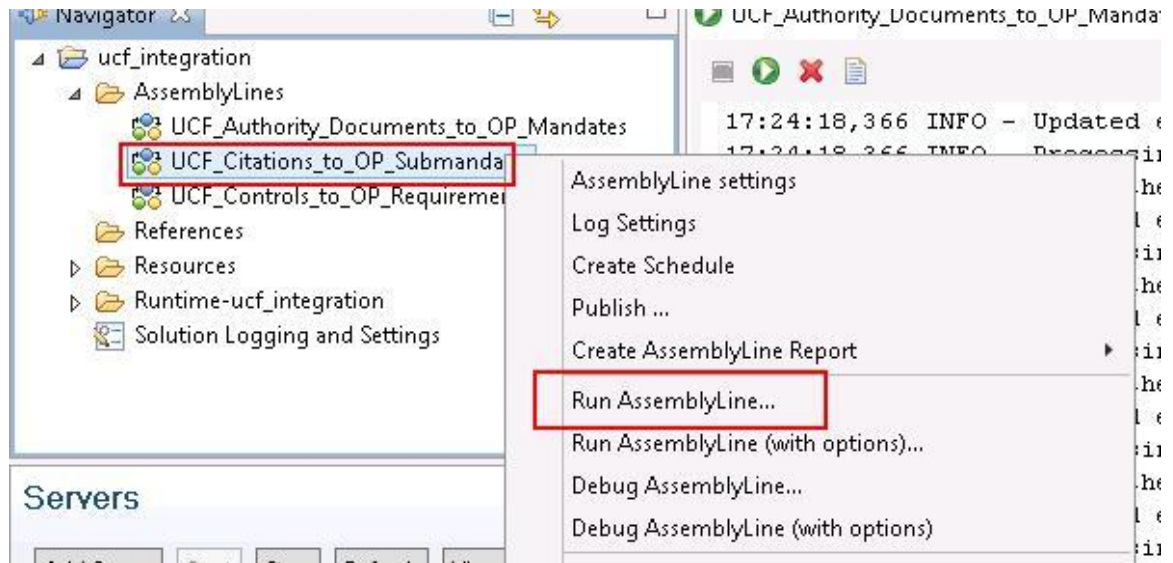

1. Open the IBM Tivoli Directory Integrator and make sure the TDI server is running, if not please follow the steps. Check the logs in the Console tab.

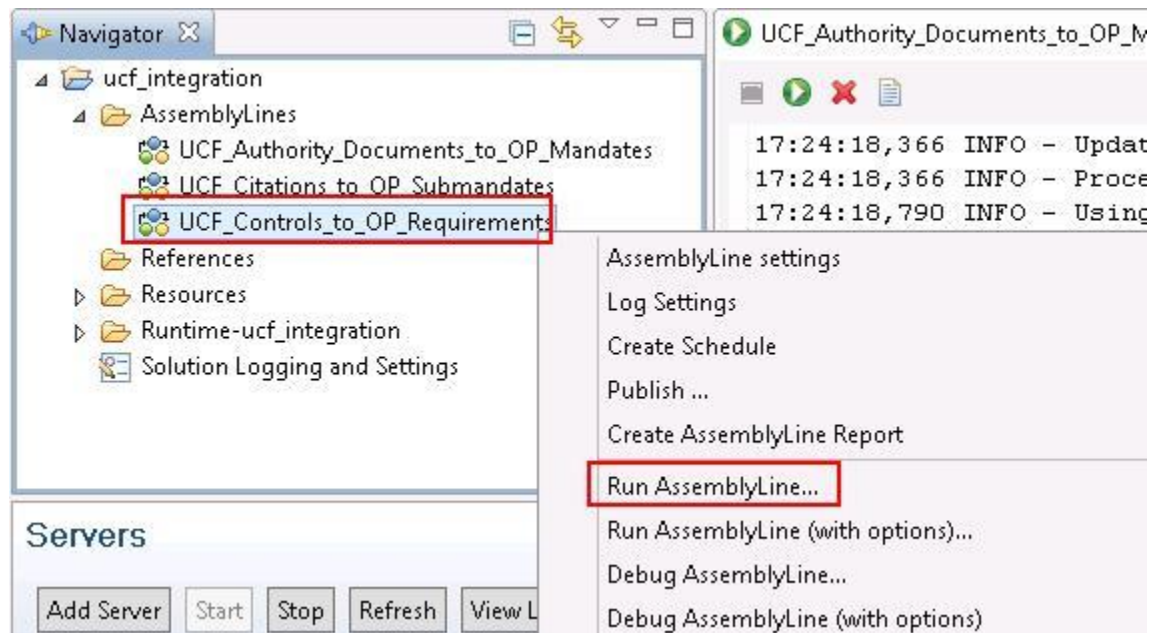

2. Open the **ucf\_integration** project.
3. Expand AssemblyLines
4. First load the UCF **Mandates** Data by using Right Click  
**UCF\_Authority\_Documents\_to\_OP\_Mandates** and choose **Run Assembly Line**
5. Verify the data load logs

6. After successful Mandates data load then load the UCF **SubMandates** Data by using Right Click **UCF\_Citations\_to\_OP\_Submandates** and choose **Run Assembly Line**

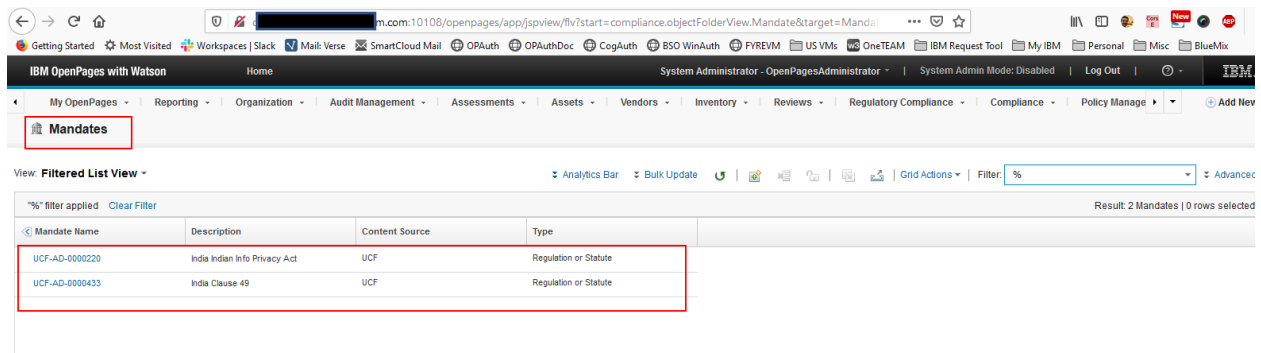

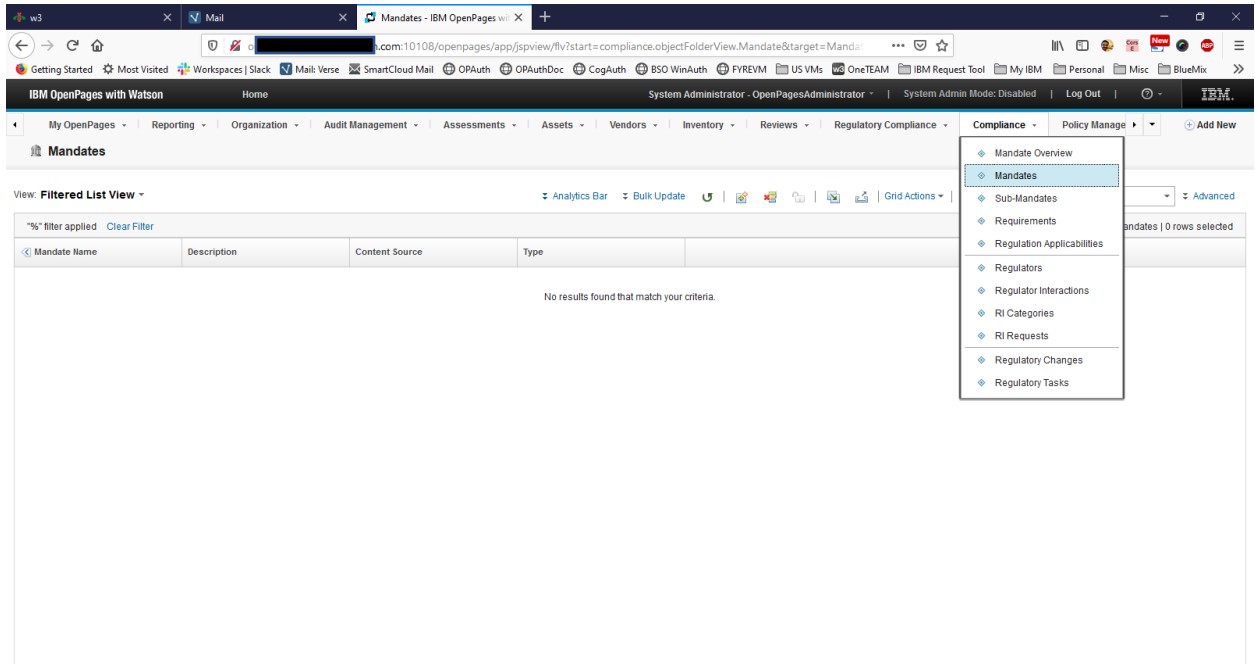

7. After successful Sub-Mandates data load then load the UCF **Requirements** Data by using Right Click **UCF\_Controls\_to\_OP\_Requirements** and choose **Run Assembly Line**

## Task 8: Test the UCF Data on OpenPages

Logon to the OpenPages Application UI  
Navigate to **Compliance** Menu -> Choose **Mandates**

Also Navigate to **Compliance** Menu -> Choose **SubMandates** to view the data.  
Also Navigate to **Compliance** Menu -> Choose **Requirements** to view the data.

## Post-Installation Instructions

Please check the logs. If you experience any issues or have any questions, please send an email to [prakashr@in.ibm.com](mailto:prakashr@in.ibm.com).

## Notices

This information was developed for products and services offered in the U.S.A.

IBM® may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing  
IBM Corporation  
North Castle Drive  
Armonk, NY 10504-1785  
U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

IBM World Trade Asia Corporation  
Licensing

Tokyo 106-0032, Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any

obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling:

- (i) the exchange of information between independently created programs and other programs (including this one) and
- (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation

550 King Street

Littleton, MA 01460

U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this information and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems.

Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only. This information is for planning purposes only. The information herein is subject to change before the products described become available. This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

#### **COPYRIGHT LICENSE**

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written.

These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. You may copy, modify, and distribute these sample programs in any form without payment to IBM for the purposes of developing, using, marketing, or distributing application programs conforming to IBM's application programming interfaces.
